## **BOOSTER STARTS PRODUCTION FOR FUEL CELL COMPONENTS**

Fuel cell and hydrogen applications are part of the global strategy to move to zero emissions, in order to protect our climate and environment.

Fuel cells used in various applications such as cars, commercial vehicles and trains are part of the global strategy for clean mobility.

After support in the development phase, BOOSTER was selected as a series supplier for the fuel cell program. Starting in 2023, BOOSTER will supply various precision components for the series project.
